

# Personal Income by States in 1962

Record Dollar Volume in All States—  
Most Major Industries Share in Expansion

**P**ERSONAL income—the most comprehensive measure of economic activity available on a geographic basis—was at a record dollar volume in all States and the District of Columbia last year accompanying a general expansion in employment and productivity.<sup>1</sup>

For the Nation as a whole, personal income in 1962 rose by approximately \$25 billion to a new high of nearly \$440 billion, 6 percent above the 1961 total. This dollar expansion represented a 5 percent gain in real income—or new purchasing power—as consumer prices rose by about 1 percent.

The largest dollar increases in 1962 were scored in the Mideast (\$5.2 billion), the Great Lakes (\$4.7 billion), the Southeast (\$4.5 billion), and the Far West (\$4.4 billion). These top-ranking gains were mainly a reflection of the large economic size of these regions; residents of these four areas receive three-fourths of all personal income in the Nation. In relative terms, however, the pace of economic expansion was in excess of the national average only in the Far West and Southeast.

## Industrial developments

Nationally, earnings of persons engaged in manufacturing accounted for \$7.2 billion of the \$25 billion rise in total income from 1961 to 1962. Regionally, the pattern of change in manufacturing earnings reflected the uneven rate of recovery of the various States from the 1961 recession low and

the importance of manufacturing as an income source in each State.

Manufacturing operations played an especially strong part in boosting the income flow in the Great Lakes and Southeast regions. In the former, recovery from recession was the main element making for an above-average upturn. In the Southeast, both recovery and continued long-term growth were important contributors to the region's 1961-62 expansion of 10 percent—largest relative gain in the Nation—in the earnings of individuals in manufacturing.

Farm income, though of much less importance than manufacturing in the income structure of most States, was by far the major factor influencing income change in a half dozen States with top-ranking gains in 1962. These included the Dakotas, Nebraska, Montana, Idaho, and Utah. In each case, however, the exceptionally large upsurge in farm income followed a decline in the preceding year.

Nationally, government income disbursements and earnings from trade and service activities, which comprise nearly one-half of total personal income, rose \$11 billion in 1962. Rates of change in these 3 major industries were generally similar among individual States. This geographically pervasive expansion added considerable buoyancy to the income flow last year and contributed heavily to the uniformity of regional income gains.

## Per capita income

As shown in table 2, per capita personal income in 1962 amounted to a record \$2,366 for the country as a whole—4 percent above the 1961 average of \$2,267. By States, average income in 1962 varied from \$3,278 in

Nevada, to \$1,285 in Mississippi. In addition to Nevada, others in the top rank with per capita incomes of more than \$2,500 last year, include Delaware (\$3,102), Connecticut (\$3,089), New York (\$2,930), California (\$2,898), New Jersey (\$2,887), Illinois (\$2,844), Massachusetts (\$2,769), Maryland (\$2,683), and Alaska (\$2,667). In the District of Columbia, per capita income rose to a record high of \$3,219.

In most States and regions, population changes approximated the nationwide increase of 2 percent, and geographic shifts in average incomes as a rule paralleled those in aggregate income, although at a lesser rate. In a few States relative changes in population and income differed significantly. Generally, this occurred in those States where population gain was a primary factor in total income growth and as a result increases in average incomes were of less-than-average proportions.

## Scope of this Report

Estimates of total income for the years 1954-62 and of per capita income for 1950-62 are shown in tables 1 and 2 of this report. Comparable figures back to 1929 may be found in tables 1 and 2 of "Personal Income by States Since 1929," a supplement to the SURVEY.

## Industrial breakdowns of income

Tables 4-62a present a detailed breakdown of income in each State for the years 1960-62 both in terms of industrial source and types of income. Comparable information for 1929 through 1953 is contained in the Personal Income supplement noted above. Figures for 1954-56 may be found in the August 1959 issue of the SURVEY; for 1957, in the August 1960 SURVEY; for 1958, in the August 1961 SURVEY and

<sup>1</sup> This report serves to update through 1962 the Office of Business Economics' annual series on personal income by States. Preliminary estimates of personal income by States in 1962 were published in the April issue of the SURVEY. That issue also contained an account of major economic developments in the regional distribution of income in 1962 as well as a summary of regional income trends since 1962.

for 1959, in the August 1962 SURVEY.

Table 63 of this issue of the SURVEY contains a breakdown of personal income by broad industrial source in 1962. For the same year, table 70 provides for each State an industrial distribution

of civilian earnings from current production; the combined total of civilian wage and salary disbursements, other labor income, and proprietors' income. These three flows account for about four-fifths of total income and afford a

comprehensive picture of the industrial structure of the various State economies. They also serve as an indicator of the industrial distribution of income produced in each State. Tables 63-69 of the Personal Income Supplement

present comparable data for selected years 1929-50. Each August issue carries these two tables in terms of the current year. However, these tables are not updated when revisions are made in the various components.

Tables XIV and XV of the Personal Income supplement, referred to above, contain estimates of disposable income and of per capita disposable income for selected years 1929-53. Figures for later years are available on request.

Copies of "Personal Income by States Since 1929" may be purchased from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402, or from the nearest Department of Commerce Field Office.

## Footnotes to Table 63:

1. Consists of net income of farm proprietors, farm wages, and farm "other" labor income, less personal contributions under the OASI program.

2. Consists of income disbursed directly to persons by the Federal and State and local governments. Comprises wages and salaries (net of employer contributions for social insurance), other labor income, interest and transfer payments.

3. Equals total personal income less farm income and government income disbursements. Note: United States totals include Alaska and Hawaii.

## Footnotes to Table 70:

1. Consists of wage and salary disbursements, other labor income, and proprietors' income.

2. Does not include earnings of military personnel.

3. Less than \$600,000.

Note: United States totals include Alaska and Hawaii.
